Omar El Amrani

Final-year engineering student

Computer Engineering & AI Student – École XX, Rabat

Seeking a 6-month PFE internship starting March 1, 2027

Phone: 0675757575 | **Email:** omarelamrano@gmail.com

Profile

Final-year computer engineering student specialising in artificial intelligence, with hands-on experience in NLP, computer vision, data analysis and web development. I build reliable machine learning pipelines, clear dashboards and well-tested web applications. Seeking a 6-month end-of-studies internship from March 2027 in AI, data or software engineering. Curious, organised and team-oriented.

Professional Experience

Internship at Société XX *Jul. 2026 – Aug. 2026*

Machine Learning Engineer Intern

— Built a text classification model with Python and Hugging Face that automatically sorts incoming customer requests by topic and urgency, replacing a slow manual triage, which cut the average routing time of a request by 40% and let the support team handle the most urgent cases first, every day of the week.

Internship at Société YY *Jul. 2025 – Aug. 2025*

Data Analyst Intern – Sales Reporting

— Automated the monthly sales reporting with SQL queries and Power BI dashboards, a report that had always been compiled by hand in spreadsheets from several sources, giving managers an up-to-date view of sales by region and product and saving the finance team about two full working days of report preparation every month.

Internship at Société ZZ *Jul. 2024 – Aug. 2024*

Web Developer Intern

— Developed an internal web application with Flask and PostgreSQL to track equipment loans between departments, which had always been recorded on paper forms, giving staff one single place to see who holds each item and reducing both lost equipment and the time spent searching for it across the different offices.

Projects & Freelance Work

Plant Disease Detection from Leaf Photographs *TensorFlow, Keras, CNN*

— Fine-tuned a pretrained convolutional network on a public dataset of leaf photos to recognise common plant diseases, and showed that data augmentation makes the model more robust.

Sentiment Analysis of Online Product Reviews *PyTorch*

— Compared a classic TF-IDF model with a fine-tuned BERT model to classify product reviews as positive or negative, and identified which approach best handles irony.

Energy Consumption Forecasting with Time Series *LSTM, Prophet, Pandas*

— Built LSTM and Prophet models to forecast the daily electricity consumption of a building from open data, and compared their accuracy to select the most reliable model for planning.

Movie Recommender Web App with Collaborative Filtering *FastAPI, React*

— Developed a web app recommending movies from user ratings with matrix factorisation, served through a REST API, and showed that it suggests more varied titles than a top-rated list.

Education

2024 - Present: Engineering Cycle in Computer Science and AI **École XX, Rabat**

Focus areas: Software Engineering, Machine Learning, NLP, Computer Vision, Cloud, Databases.

2022 - 2024: Integrated Preparatory Classes **École XX, Rabat**

2021 - 2022: Baccalaureate in Physical Sciences **Lycée XX, Rabat**

Technical Skills

— **AI & Data Science:** Python, TensorFlow, Keras, Scikit-learn, Hugging Face, OpenCV, Pandas, NumPy, NLP, computer vision, time series, MLOps, SQL.

— **Software & Data Engineering:** Java, Spring Boot, C/C++, .NET, JavaScript, React, Angular, Node.js, Flask, FastAPI, Docker, Kubernetes, Git, GitHub Actions, Linux, PostgreSQL, Oracle, MongoDB, Elasticsearch, Apache Kafka, Airflow, AWS, Azure, Tableau.

Certifications

— Python for Data Science
— Machine Learning Foundations
— Natural Language Processing Basics
— Cloud Computing Fundamentals
— SQL and Relational Databases
— Docker & Kubernetes Essentials

Languages

— **Arabic:** Native
— **French:** Bilingual
— **English:** Fluent (B2)

Soft Skills

— Curiosity and initiative
— Communication and teamwork
— Organisation and prioritisation
